

# Connecting the Rain Drops

## Teaching Summer Campers about Stormwater Runoffs and Pollutants

To raise awareness the Stormwater Management Division taught summer campers what can be done in daily activities to reduce pollution associated with stormwater runoff!

Stormwater awareness was taken to the next level and the next generation by teaching the kids of the summer camp about stormwater runoffs in their community. Awareness for kids is an invaluable tool!

The summer campers were able to participate in a super cool stormwater experiment. It allowed them to demonstrate what happens as the stormwater runoff picks up pollutants like pesticides, animal waste, oil, litter or sediment on its way to our creeks, streams and rivers. They now can proclaim that

**“Only Rain Down the Storm Drain”.**
